

Precision COBOTICS

Trusted
Lean
Integration
Partner

WHY LEAN INTEGRATION?

As a Lean Integrator, we offer complete solutions for our customers while maintaining focus on a specific set of applications. By leveraging proven technology solutions, we “buy not build”, which de-risks and accelerates project deployment. Our low-overhead business model and cross-disciplined team delivers cost efficiency that reduces time to ROI.

OUR FOCUS PROCESS APPLICATIONS

MACHINE TENDING

METROLOGY

QUALITY INSPECTION

BIN PICKING

MATERIAL HANDLING

ASSEMBLY

CORNERSTONE TECHNOLOGY

UNIVERSAL ROBOTS
Certified System Integrator

As a CSI, we leverage the entire UR ecosystem and distribution network to offer local support.

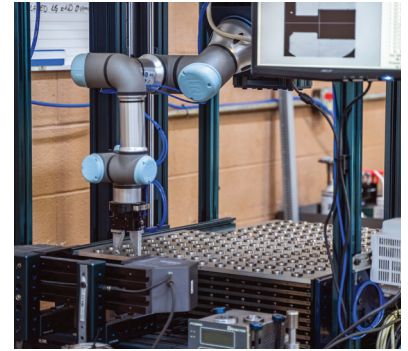

APER A
Certified Partner

We can simplify part presentation with the industry leader in 4D bin picking technology driven by AI.

WHO ARE WE?

Our shareholder group has owned and operated manufacturing companies for over 100 years in the Eastern US region. In 2018, an investment strategy was initiated to develop a process automation competency. Solving labor constraints and optimizing use of manufacturing assets while offering new skills to our valued human resources was identified as a key to staying competitive and providing value for our customers.

After four years of realizing success in delivering intercompany solutions, Precision Robotics was founded in 2022 to fulfill rapidly emerging automation needs in the market.

2019: Our first cobot automated inspection solution.

Product training with customers and staff at Precision Robotics

As a team, we have a deep understanding of how to create measurable value through automation. Our principals offer trust developed over decades in the automation and manufacturing industry.

We are dedicated to furthering the adoption of automation and regularly offer product training for our customers. We are passionate about workforce development, and are engaged with our local primary and higher education partners to train and help offer pathways to rewarding careers in automation.
